

CONTENT USAGE GUIDE

Hey **[Client's Name]**,

This guide will help you transfer, upload, and share your content in the best possible quality while ensuring it performs well on each platform.

1. TRANSFERRING FILES WITHOUT LOSING QUALITY

Before uploading, it's crucial to move the files correctly between devices to avoid compression and loss of quality.

Mac Users (Using AirDrop)

- ✓ Use AirDrop to transfer videos/photos from your Mac to iPhone:
 - Open Finder and select your files.
 - Right-click → Share → AirDrop → Select your iPhone.
 - Important: Ensure AirDrop is set to "Everyone" and transfer files in their original format (ProRes, 4K, or high-res JPEG/PNG).

Windows Users (Transferring to iPhone)

- ✓ The easiest way is to use iCloud Drive or a tool like Snapdrop.net:
 - Upload the files to iCloud Drive on your PC.
 - On your iPhone, open Files → iCloud Drive, then download the content.
 - Alternatively, use Google Drive or Dropbox, but ensure to download in original quality.

Windows Users (Transferring to Android)

- ✓ Use Google Drive or a direct USB connection:
 - Upload files to Google Drive from your PC.
 - Open the Google Drive app on your phone and download them.
 - Alternative: Use a USB-C or OTG cable to move files manually.

2. UPLOADING WITHOUT LOSING QUALITY

Each platform has different settings that affect how content is processed. Follow these steps to ensure maximum quality.

Instagram (Reels, Posts, and Stories)

⚙️ Settings:

- Go to Settings → Account → Data Usage → Enable "Upload at Highest Quality."
- Recommended File Formats: MP4 (H.264) for videos, PNG/JPG for images.
 - Aspect Ratio: Reels & Stories: 9:16 (1080x1920px).
 - Feed Posts: 4:5 (1080x1350px) for best appearance.

Pro Tips:

- ✓ Don't upload from WhatsApp or other apps that compress files. Always transfer directly from your phone's gallery.
- ✓ Avoid adding excessive filters/effects inside Instagram, as they reduce quality.

TikTok (Videos & Ads)

⚙️ Settings:

- Ensure "Upload HD" is enabled (appears during the final upload step).
- Recommended File Format: MP4 (H.264) or MOV.
- Aspect Ratio: 9:16 (1080x1920px).

Pro Tips:

- ✓ Post directly through the TikTok app for better compression handling.
- ✓ Test different descriptions, hashtags, and sounds to see what performs best.

Facebook (Posts, Stories & Ads)

⚙️ Settings:

- Enable "Upload in HD" under Settings → Media and Contacts.
- File Format: MP4 (H.264) or PNG/JPEG.
 - Aspect Ratio: Stories/Reels: 9:16 (1080x1920px).
 - Feed Posts: 4:5 (1080x1350px).

Pro Tips:

- ✓ Video posts perform better than image posts—use them when possible.
- ✓ Use native Facebook tools to add captions for accessibility.

LinkedIn (Videos & Image Posts)

⚙️ Settings:

- File Format: MP4 (H.264) for videos, PNG/JPEG for images.
 - Aspect Ratio: Videos: 1:1 (1080x1080px) or 16:9 (1920x1080px).
 - Images: 4:5 (1080x1350px) works best for mobile.

Pro Tips:

- ✓ LinkedIn favors organic engagement—avoid using outbound links in the post text.
- ✓ Upload videos natively rather than linking from YouTube for better reach.

YouTube (Long-Form & Shorts)

⚙️ Settings:

- File Format: MP4 (H.264) for best compatibility.
 - Aspect Ratio: Shorts: 9:16 (1080x1920px).
 - Standard Videos: 16:9 (1920x1080px or 4K).

Pro Tips:

- ✓ Upload directly from desktop if possible to avoid compression.
- ✓ Use custom thumbnails for better click-through rates.

3. DESCRIPTIONS, HASHTAGS & CAPTIONS (BEST PRACTICES)

There's no universal "right way" to use descriptions and hashtags, but testing different approaches is key.

Instagram & TikTok

- Descriptions should be short, engaging, and relevant to the content.
- Hashtags: Some content does well without hashtags, while others need them.
- Try a mix of niche-specific and trending hashtags.
- Example: If your video is about luxury travel, test tags like #LuxuryTravel #TravelGoals #5StarHotels.

LinkedIn & Facebook

- Posts should have a clear call-to-action (CTA).
- Hashtags are less important here but can still help.

YouTube

- Use SEO-optimized titles and descriptions.
- Write a detailed description with keywords to improve discoverability.
- Hashtags help, but the algorithm prioritizes good titles and watch time.

4. TRACK PERFORMANCE & OPTIMIZE

Once you start posting, track how your content performs:

Instagram: Insights → Engagement (shares, saves, reach).

TikTok: Creator Tools → Analytics (watch time, shares).

YouTube: Studio → Analytics (retention, traffic sources).

LinkedIn: Post insights (engagement & profile views).

Pro Tip:

Analyze what works & adjust your strategy.

If a certain style of content performs well, replicate that success!

This guide ensures that your content retains its original quality and is optimized for each platform.
